

Improving Surgical Outcomes with IMPACT[®] formulas

Perioperative IMPACT[®] protocols benefit patients undergoing major elective surgery, regardless of nutritional status

- IMPACT[®] formulas provide a unique evidence-based nutrient blend (arginine, omega-3 fatty acids from fish oil, and nucleotides).
- This blend is proven to meet the unique nutritional needs of major elective surgery patients and reduce the risk of infectious complications in major elective surgery patients by 51% (p=0.00001) on average.¹⁻³

* Initiate IMPACT[®] tube feeding and advance to ≥ 1000 calories/day to meet nutritional needs for at least 5 days. Also available in open system.

USE UNDER MEDICAL SUPERVISION. NOT INDICATED WHEN IMMUNE SUPPRESSION IS DESIRED.
